

KOMMANA VIKAS

BACKEND DEVELOPER | NODE.JS | TYPESCRIPT | REST APIS | MONGODB | REDIS

Hyderabad, Telangana | +91 9014295598 | kommana02@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Backend-focused Software Developer with 3.5+ years of experience delivering production applications with Node.js, Express.js, TypeScript, Laravel, MongoDB, PostgreSQL, Redis, and RESTful services. Skilled in server-side development, authentication and authorization, RBAC, data modeling, caching, real-time communication, third-party integrations, and performance tuning. Experienced in SDLC activities including implementation, debugging, unit testing, deployment support.

TECHNICAL SKILLS

Backend Engineering: Node.js, Express.js, Laravel, PHP, RESTful Services, API Design, WebSockets, Socket.IO

Languages: JavaScript (ES6+), TypeScript, PHP

Data: MongoDB, PostgreSQL, MySQL, phpMyAdmin

Performance: Redis, Caching, Query Optimization, API Optimization, Database Optimization

Security: JWT, Authentication, Authorization, Role-Based Access Control (RBAC), Session Management

Cloud & Tools: AWS S3, Git, GitHub, Figma

Quality & Delivery: Unit Testing, Debugging, SDLC

Frontend: React.js, Next.js, React Hooks, Tailwind CSS, Material UI, Bootstrap

PROFESSIONAL EXPERIENCE

Full Stack Developer — Miraki Technology | Aug 2024 – Present | Hyderabad, India

- Built and maintained server-side modules with Node.js, and TypeScript for production web applications.
- Designed API endpoints and business workflows covering data processing, authentication, authorization, and client-server communication.
- Refined request handling and persistence operations, contributing to a 20% reduction in data retrieval time.
- Applied modular architecture and reusable services to improve maintainability, extensibility, and scalability.
- Leveraged Redis caching and efficient database workflows to reduce redundant processing and improve response efficiency.
- Performed unit testing for service-layer logic and validation scenarios to catch regressions before integration and release.
- Investigated defects, participated in peer reviews, resolved production issues, and supported feature delivery.
- Worked with product managers, designers, and developers across 3 Agile teams; delivered enhancements contributing to 15–20% higher user engagement.

Frontend Developer — Emblix Solutions | Mar 2023 – Jul 2024 | Hyderabad, India

- Created reusable React.js and TypeScript components and connected client applications with REST services across 5+ projects.
- Handled API consumption, response validation, authentication flows, state management, and error scenarios.
- Converted client requirements into technical implementations through close coordination with cross-functional teams.
- Improved performance and usability across 10+ websites through application and page-level optimization.
- Contributed to debugging, maintenance, release activities, and iterative Agile delivery.

PROJECTS

IGBC Rating System — Enterprise Certification Platform | *Laravel, PHP, REST APIs, Redis, MySQL, AWS S3*

- Developed server-side modules supporting project evaluation, document verification, scoring, and certification workflows.
- Engineered dynamic annexure calculations to validate parameters, process evidence, and generate scores from certification criteria.
- Created role-aware APIs and workflows for 5 user types, reducing manual certification activity by approximately 40%.
- Modeled database workflows for project data, documents, assessments, scores, remarks, and certification records.
- Introduced Redis caching, contributing to a 35% reduction in report generation time.
- Integrated AWS S3 for document storage and retrieval and implemented validation for submission, approval, rejection, and scoring processes.

Real-Time Chat Application | *Node.js, Express.js, Socket.IO, MongoDB, JavaScript, REST APIs*

- Implemented server-side functionality for authentication, profiles, session handling, administration, and application workflows.
- Exposed REST endpoints for user and platform operations with structured request/response handling.
- Established WebSocket communication through Socket.IO for low-latency messaging supporting 500+ concurrent users.
- Used an event-driven design for asynchronous message processing and live client updates without page refreshes.
- Structured MongoDB collections and access patterns for efficient persistence and retrieval.

Rejoice Music Streaming Application | *PHP, JavaScript, REST APIs, Redis, MySQL, Razorpay, AWS S3*

- Implemented backend functionality for users, artists, albums, songs, content publishing, and streaming operations.
- Built activity tracking for streams, listening duration, user engagement, artist metrics, and revenue analytics.
- Applied permission-based workflows for authentication, content submission, approvals, moderation, and user interactions.
- Improved data consistency and corrected legacy tracking issues affecting reporting and operational visibility.
- Integrated Redis, Razorpay, and AWS S3 within application workflows.

EDUCATION

Bachelor of Computer Application (BCA) — Siddhartha Degree & PG College, Hyderabad, Telangana | 2019 – 2022
